PROJECTS :

1. **Online Bus Booking -** Online Bus Booking is a project that allows users to book a particular seat in a particular bus for their desired journey. The bookings can be seen according to the date and time slot. Users can even compare the prices of different buses for same journey.

2. **Smart Health Predictor -** The core idea behind the project is to propose a system that allows users to get instant guidance on their health issues. This system is fed with various symptoms and the disease/illness. It processes user's symptoms to check for various illnesses that could be associated with it.

3. **Cattle Management System -** The project "Cattle Management System" is a web-based application that provides various services to the buyers and sellers like they can select the cattle of their choice to buy or they can also sell any of their cattle on the website at affordable price.

4. **Corona Virus Tracker -** The Corona Virus Tracker is a web-application that allows users to track live status of COVID-19 cases anytime anywhere. The web-app is purely built in Python, it uses web scrapping technique to gather data from an API of India's official website.
